When it comes to cryptocurrencies, one of the biggest challenges for investors is not getting caught up in the hype.

FOMO

FOMO stands for fear of missing out.
it is a common thing among novice traders.
You are often afraid that you will miss out on profit,
but in the end that can cause a loss.

HODL

HODL stands for hold on for dear life.
many novice traders want to make money quickly,
but holding crypto for a long time is a strong/often
used strategy that can yield a lot of returns.

Go next

The first you want to do to get in to crypto is to do research. With charts you can see what the value was previously and can guess if it goes up or down.

Charts

With charts you can see what is playing with the value of the coin. Experienced traders can guess what happens in the future.

Candlestick

Every candle has a body and a couple of shadows that are sticking out of it. The body shows you the difference between the opening and closing price.

Market cap

With the market cap you can see what the circulating supply is of the coin.

Go next

Ofcourse there are risks in trading. Here we tell you which risk come with cryptotrading

Risks of losing value

Do a research on the official website of the coin.

Fraud and money laundering

Look at how many have invested in it. Is it popular?

Invest only what you can lose!

There should be enough information available about them on social platforms. It is a cause for concern if the creators are anonymous.

Watch out for high promises

Investors should trace information to its source to verify its credibility.

Track the creators

There should be enough information available about them on social platforms. It is a cause for concern if the creators are anonymous.

Go next

There is a diverse range of coins you can invest in. How do you know which to invest in? We'll tell you the most popular ones

Ethereum

Ethereum is by far the largest and most popular alternative to Bitcoin, but it was built with an entirely different goal in mind.

Solana

Compared to Ethereum, Solana is a relative newcomer to the crypto space. The cryptocurrency has skyrocketed in popularity, however, making Solana the fourth-most-valuable crypto in the world.

Polkadot

The Polkadot blockchain launched in 2020 and was developed by Ethereum co-founder Gavin Wood. Polkadot operates a main network blockchain where transactions are permanent.
